

SPTools365

Connect TYPO3 6/7 with Microsoft © SharePoint 2013 and Office 365

Version 1.1.0

Overview Brochure

Product description

The **SPTools** Extensions for TYPO3 has been developed to take advantage of both systems, **Microsoft SharePoint** and **TYPO3 CMS**, in one solution.

Via the middleware SPTools the systems form an attractive enterprise system, which connects TYPO3 with the SharePoint Server or the Office 365 cloud solution.

The SPTools offer the connection of TYPO3 to SharePoint sites, the display of SharePoint libraries and lists, data and file transfers via forms, synchronization of SharePoint data and files with TYPO3 extensions or the TYPO3 file system / FAL (File Abstraction Layer) and the integration of SharePoint FAST Search.

The SPTools were developed in the first version to connect to Windows SharePoint Services (WSS) 3.0 and Microsoft Office SharePoint Server (MOSS) 2007.

The current version SPTools365 is the third generation and connects TYPO3 versions 6/7 with SharePoint 2013 and SharePoint Online or OneDrive Business in Office 365.

Features Overview

SPTools365 features

Authentication	<ul style="list-style-type: none"> NTLM claims-based direct AD DS authentication SAML-token-based via authentication providers
